RRC's Parks and Recreation, Open Space and Trails Needs Assessment Experience

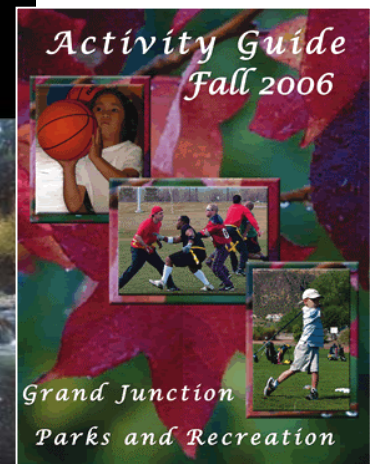

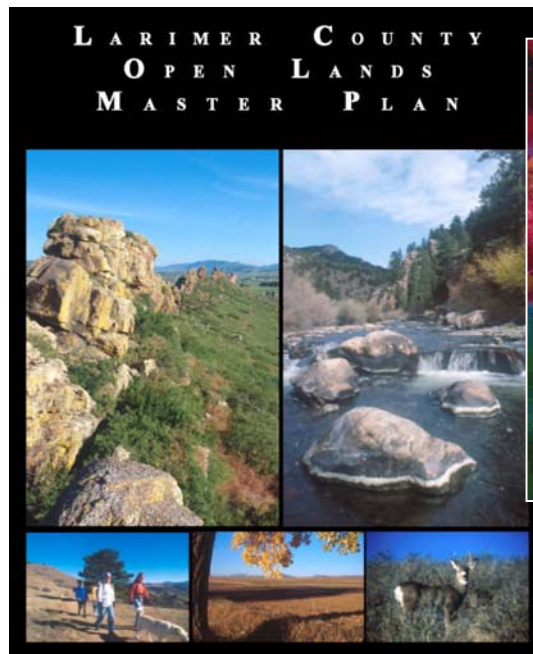

RRC has extensive experience with parks and recreation and open space and trails needs assessment studies for cities, counties, and recreation districts. The goal of the studies is to obtain citizen input on a variety of topics related to parks and recreation use and community priorities for future improvements, with particular emphasis on support for community recreation centers and aquatic facilities. A variety of research techniques are used in the studies, including telephone, mail, Internet, user surveys, and focus groups. Current satisfaction levels with existing facilities and programs are also measured, as is the relative importance of specific new priorities, facilities, and policies most desired and needed by the communities. Results and conclusions from the research help guide the development of recreation master plans in the communities.

Some recent clients include:

- Vail Recreation District / Town of Vail Parks and Recreation
- Denver Recreation Centers Needs Assessment
- Town of Carbondale Parks and Recreation
- Boulder Valley School District Athletic Facilities
- Black Hawk Open Space and Heritage Master Plan
- City of Boulder Parks and Recreation
